**Working With Blast:
manual and “automatic” use**

Spring 2021

Oliver BONHAM-CARTER

Exam 1 :: **UPDATE!!!**

During lab Monday, 12th April

- Multiple choice, Short answer, Short essay,
- Given online on Sakai's "*Tests and Quizzes*" Tab at the beginning of lab.
- You will have **48 hours** to take the exam starting from Monday's lab (2:50pm) [DUE TO SPRING BREAK: 13April]
- The exam will be **due** on **14th April** at 2:50pm and will likely take about two hours to complete during that time.

EXAM

Blast:

Making sense of scores

- **Max Score**
 - The score of the best matching segment for local alignment, not global
- **Total Score**
 - The total scores of all matching segments found (same as max score if there is only one matching segment)
- **Query Coverage**
 - The percentage of the query sequence that aligned to some part of the match.
- **E-Value**
 - A statistical measure evaluating how likely it is that a match this good could occur by chance. Lower e-scores indicate that both sequences are truly similar and are not similar by chance alone. Identical sequences have e-scores of zero.
- **Max Indent**
 - The percentage of nucleotides that are identical between the query and the target sequences within the matching regions.
